

POEM OF THE WEEK

ENERGY AND MATTER

From a personal "If I had the energy, it might matter".
To the cosmic, the square root of (energy over matter)
equals a universal constant, the speed of light
Travelling in a vacuum of space as we know it

Confused? Are you eager to retreat to the first line?
"If I had the energy, it might matter!"? Ponder and wonder
If your idea of energy were on a scale of 1 to 10 representing
The infinitesimally small to the infinitesimally large

Your plea might only just register. If it did, it would be on
The same line shows motor cars, rockets and stars
Fiercely burning and spreading light. Further, the equation shows
We do matter, that energy and matter are eternally linked

That we can be said to be made up of material from The Big Bang
Billions of years ago. There's no "if". Matter and energy
are variations of the same thing in the state of being
Each can convert into the other.

In our next life
We could be a star
A Luminous, Fiery Star
A Star To Wish Upon
